People are sick about AOL .It not the first time that AOL suit some companies .Every time they want to block the expansion to some companies just because them bought the small companies for almost nothing and after that, need some time to get a chance to come first with their technology. They do not have any interest for the customers .The only thing is important for them to be number ONE.. No matter what painful for the old and young peoples who did not have chance to learn the computer at school to use it.I thank you very much microsoft for what they do for the world; our life change ,I learn to use the computer by myself 15 years ago.It was hard to use all commands and I spent very much time to catch up everything to understand how this will work and be able to fellow the conversation with my children and the employes . The window come and it was the happy time for all to use the computer faster and more efficiently. I use both ten years ago NEMSCAPE and msn explorer .Always I come back with msn explorer because it was easier . sincerely dube@sensible-net.com
